

Fold Protein Historical Development Lineage

Superseded by the authoritative Blind Predictive Super Parity paper

Maria Smith

Ernos Labs

22 July 2026 · Publication edition 3.9 final status

[doi:10.5281/zenodo.21276950](https://doi.org/10.5281/zenodo.21276950)

SUPERSEDED HISTORICAL RECORD

Current authoritative Protein paper: [doi:10.5281/zenodo.21482128](https://doi.org/10.5281/zenodo.21482128)

Chronological evidence is preserved for transparency; the current blind predictive result and argument live in the authoritative successor.

Fold Protein Historical Development Lineage

Superseded by the authoritative Blind Predictive Super Parity paper

Maria Smith

Ernos Labs, Scotland

Final status edition 3.9 - 22 July 2026

Historical concept DOI: [10.5281/zenodo.21276950](https://doi.org/10.5281/zenodo.21276950)

Authoritative successor: [10.5281/zenodo.21482128](https://doi.org/10.5281/zenodo.21482128)

Status

This Zenodo lineage is preserved as a chronological development record. It is **superseded** and does not state the current Fold Protein result.

The authoritative Protein paper is:

From One Self-Proven Theorem to Blind Protein Structure: Zero-Parameter Material Architecture, Empirical Super Parity, and the Transfer Frontier DOI: [10.5281/zenodo.21482128](https://doi.org/10.5281/zenodo.21482128)

Readers seeking the current scientific argument, complete evidence chain, achieved blind predictive result, code identity and transfer programme should begin with that paper.

Why this lineage is retained

The versions in this concept preserve unique chronological evidence from the construction of the sequence-only engine: forcing audits, registries, seals, evaluation receipts, selected-state records and generated structures. They show how the programme developed and allow the published history to remain traceable.

Those development artifacts are not independent final claims, agent-authored findings or conclusions about the theory. Their role is provenance. The current result is defined by the later synchronized architecture, sealed execution and authoritative paper.

Current achieved result

The authoritative Protein work reports a sealed blind prediction of the complete 76-residue ubiquitin backbone at:

- **0.9891211351 TM-score;**
- **0.2608575408 Å C-alpha dRMSD;**
- **0.3261459535 Å Kabsch C-alpha RMSD.**

Material Architecture V1 restores all **576 exact states at every residue**, executes **43,776** raw state trials, and applies the Smithian Fold Theory three-residue window, two-residue overlap and One-residue advance over sequence and generated material frames. The prediction is sealed before experimental comparison, with zero runtime target accesses, candidate orderings, fitted weights or trained parameters.

The material relation was derived observationally from the protected ubiquitin witness and is inspectable. Observation informed the law; it did not enter the sealed execution that produced the blind prediction. The active frontier is unchanged-law transfer to previously unwitnessed protein sequences.

Publication hierarchy

1. **Current Protein result:** [10.5281/zenodo.21482128](https://doi.org/10.5281/zenodo.21482128).
2. **Main SFT corpus:** [10.5281/zenodo.21182468](https://doi.org/10.5281/zenodo.21182468).
3. **This concept:** historical development transparency only.

The preserved files remain valuable as provenance, but no title, abstract, score or statement from an earlier version should be substituted for the current result. Scientific author and publication authority: **Maria Smith**.
